

Jobair Al Sarkar

Full Stack Software Engineer

Dhaka, Bangladesh | +880 1766 961460 | jobair.a.sarkar@gmail.com

github.com/jobairalsarkar1 | linkedin.com/in/jobair-al-sarkar | jobairalsarkar.com

Full Stack Software Engineer with 3 years of experience building production web applications, backend services, and data workflows. Experienced with TypeScript and Node.js systems, React and Next.js interfaces, PostgreSQL and Oracle databases, and Kafka-based CDC pipelines. Delivered software across healthcare ERP, digital media, SaaS, and developer tooling products.

Experience

Software Engineer

FringeCore | Full-time | Dhaka, Bangladesh (On-site) | Nov 2025 – Present

- Delivered and stabilized 3 core Hospital Information System modules using React and type-safe tRPC APIs, including appointment management, patient registration, and user access control, while contributing across additional HIS/ERP modules.
- Built an Electron auto-update workflow using a Cloudflare Worker for release metadata and a Docker/Traefik download service for versioned Windows and Linux installers.
- Built a Kafka-based CDC synchronization pipeline supporting a phased Oracle-to-PostgreSQL migration while existing hospital operations remained online.
- Improved response times in key hospital workflows by an estimated 60% compared with the prior implementation by resolving cross-module defects and optimizing application and database flows.
- Architected a desktop-style React application shell with closable, route-aware workspace tabs, persistent per-module state, horizontal overflow handling, and grouped child routes, allowing hospital staff to move between complex workflows without losing context.

Full Stack Developer

Picture TV | Contract | New York, United States (Remote) | Jun 2025 – Dec 2025

- Built a digital media marketplace for buying and selling images and videos using React, Next.js, Node.js, Prisma, and MongoDB.
- Implemented authentication and role-based access using JWT and magic links, plus Stripe-powered payment workflows for secure transactions.
- Developed administration and content management workflows for users, events, blogs, and uploaded media, and contributed to media delivery optimization.

Software Engineer Intern

Logic Matrix LLC | Full-time | Manassas, Virginia, United States (Remote) | Feb 2025 – May 2025

- Developed full-stack product features using Next.js, React, Express.js, PostgreSQL, and Prisma in collaboration with the engineering team.
- Integrated Azure AI Video Indexer for transcription, video insights, and automated media analysis workflows.
- Implemented subscription billing and authentication functionality and improved media delivery performance using Cloudflare.

Full Stack Developer

Self-Employed | Freelance | Jun 2023 – Oct 2024

- Delivered full-stack web applications for international clients using Next.js, React, Node.js, PostgreSQL, and MongoDB.
- Built authentication, administration, and payment workflows and managed delivery from requirements and architecture through deployment and client handoff.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C#

Frontend: React, Next.js, React Native, Tailwind CSS

Backend: Node.js, Express.js, tRPC, Django, Flask, .NET, Prisma, REST APIs

Data and Architecture: PostgreSQL, MongoDB, Oracle, Kafka, CDC pipelines, monorepo architecture, system design

Cloud and DevOps: Azure, Cloudflare Workers, Docker, Traefik, Git, CI/CD

Projects

Redaxify – AI-Powered Video Indexing Platform | redaxify.com

- Built an AI-powered video processing platform using Azure AI Video Indexer and Azure OpenAI for transcription, summarization, and automated insights.
- Developed Node.js, Express.js, and TypeScript services for media processing, authentication, API integrations, and secure Azure Cloud Storage workflows.
- Implemented role-based access, video upload and playback, and Stripe subscription management for SaaS monetization.

Envkeyring – Encrypted Environment Variable Manager CLI | npmjs.com/package/envkeyring

- Built a Node.js and TypeScript CLI for encrypted environment variable management across teams and monorepos.
- Implemented AES-256-GCM encryption with secure key derivation, keeping sensitive values protected while configuration metadata remains version controlled.
- Designed init, seal, unlock, and reseal workflows with filesystem-based project discovery to simplify team environment setup and secret sharing.

Education

Bachelor of Science in Computer Science

BRAC University, Bangladesh | Oct 2021 – Sep 2025

Relevant Coursework: Operating Systems, Software Engineering, System Design, Data Structures and Algorithms
